Summary

Data Engineer with **3+ years** of experience building **scalable**, production-grade data pipelines and analytics platforms across cloud environments. Strong background in **Azure**, **Microsoft Fabric** and **AWS**, with hands-on experience supporting **BI**, **SaaS** integrations, and data platforms for **AI/ML**-enabled products.

Experiences

Software Development Engineer II (Data Engineer) **12/2025 - Present**
Gruve AI *Pune, Maharashtra*

- Designed and maintained end-to-end data pipelines on **Microsoft Fabric**, enabling reliable ingestion, transformation, and delivery of analytics- and BI-ready datasets.
- Built and maintained **BI dashboards** to track platform usage, **operational metrics**, and key business **KPIs**, supporting data-driven decisions for stakeholders.
- Enabled operational visibility and cost optimization by identifying inactive users with enterprise licenses via **automated reporting pipelines**.
- Implemented scalable ingestion and transformation workflows to integrate external **SaaS platforms**, including **Glean** and **Office 365**, into centralized analytics datasets via API-based pipelines.
- Architected an **automated migration framework** to orchestrate extraction and transfer of complete data from **Salesforce to Dynamics 365**, reducing manual overhead while ensuring 100% data integrity through automated schema mapping.
- Modeled, optimized, and queried analytical datasets in **Snowflake**, improving query performance and supporting downstream reporting and analytics workloads.

Data Engineer **01/2024 - 07/2025**
School of Public Health, Indiana University *Remote, USA*

- Migrated large datasets (20+ Excel and R files) from on-premise systems to **cloud storage**, leveraging efficient transfer methods and **API integrations**, which improved accessibility and collaboration across data engineering and data science teams.
- Designed, built, and automated scalable **ETL pipelines** using **Google Cloud Composer (Airflow)** and **AWS Lambda**, engineered for performance optimization, achieving a **24% reduction in ingestion latency** and improved throughput.
- Engineered a robust end-to-end data validation framework with **AWS Glue** and **GitLab CI/CD**, enabling automated schema and quality checks that reduced critical production data errors by **15%**.
- Architected and implemented scalable storage solutions with **Amazon RDS** and **S3**, applying intelligent partitioning and compression strategies that handled a **30% data volume increase** while lowering monthly storage costs by **15%**.
- Developed secure and compliant data pipelines and models adhering to **HIPAA** and **GDPR**, incorporating **AES-256 encryption** and privacy-preserving techniques to strengthen governance and reduce vulnerabilities by 25%.
- Delivered interactive **Tableau dashboards** powered by optimized SQL and statistical analyses, translating stakeholder needs into actionable insights that improved decision-making speed and accuracy by **23%**.

Data Engineer **06/2021 - 07/2022**
eGain Corporation *Pune, India*

- Engineered high-performance SQL and Python ETL pipelines using **Azure Data Factory** and **Azure SQL Database**, improving data flow reliability by **30%** across large-scale healthcare and finance datasets.
- Conceptualized scalable data models and architectures in **Azure SQL** and **Databricks**, enabling advanced analytics and efficient support for enterprise-scale reporting and workloads.
- Implemented monitoring and alerting with **Azure Monitor** and custom SQL triggers, reducing critical incident resolution times by over **25%** and improving pipeline reliability.
- Devised CI/CD-enabled data pipelines using **Azure DevOps**, automating deployment, validation, and testing of ETL workflows to accelerate delivery speed and ensure production readiness.
- Optimized end-to-end data pipelines by tuning **Spark jobs** in **Azure Databricks**, refining indexing strategies and partitioning schemas, achieving a **15% improvement** in query performance and dashboard responsiveness.
- Produced interactive **Power BI dashboards** with advanced **DAX** calculations, integrating **Azure Data Lake** and SQL sources to deliver actionable insights while reducing reporting lag by **35%**.

Skills

Programming: Python, SQL, PySpark
Databases & Warehouses: PostgreSQL, MySQL, AWS Redshift
Data Engineering: Apache Airflow, dbt, ETL/ELT, Data Modeling, Data Quality
Cloud: Microsoft Fabric, Azure (Data Factory, Data Lake), Snowflake, AWS (S3, Glue)
CI/CD and DevOps: Git, GitLab, Docker
BI & Analytics: Power BI, Tableau

Projects

Dynamic-Commentary | *Python, YouTube API, Pydub, ChatGPT API, NLTK, Data Visualization* [Link](#)

- Directed a project on tonal shifts and narrative strategies in esports commentary, enhancing stakeholder insights, and improving sentiment analysis accuracy by **20%** using **ChatGPT API** and **NLTK's VADER**.
- Created interactive **Python** visualizations to map sentiment plots, identifying key tonal shift moments of the commentators accompanied with that of the live audience chat with **90%** precision.

Education

Indiana University, Bloomington **08/2022 - 05/2024**
Master of Science in Data Science
